SUMMARY

Fullstack developer with 6+ years building and shipping production web platforms in TypeScript. Backend focus on NestJS and Node.js — multi-tenant SaaS, REST and WebSocket APIs, real-time state synchronization and event-driven services. On the frontend, React and Angular at scale, including a full AngularJS → Angular 15 migration and complex state management with NgRx and Redux. Comfortable owning the path to production: Linux servers, automated deployments, and SQL/NoSQL data modeling. Hands-on with AI engineering: built a multi-agent system with LangGraph, Claude and local LLMs (structured output, RAG, LangSmith tracing).

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), PHP, Java, Python, SQL
AI / LLM	LangGraph, LangChain, Claude API, Ollama (local LLMs), multi-agent systems, structured outputs (Pydantic / Outlines), RAG / GraphRAG, prompt engineering, LangSmith
Backend	NestJS, Node.js, Express, Colyseus, Laravel, Spring Boot, REST APIs, WebSockets, Socket.IO, JWT / Passport
Frontend	React, Angular (2+ / 15), Redux, NgRx, Vite, MUI, TailwindCSS, SVG / data visualization
Databases	PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch, TypeORM
Infra & Tools	Linux, Nginx, Docker, Podman, AWS S3, PM2, Nx monorepo, Git (GitHub / GitLab), Jest, Swagger, WildFly
Practices	Clean Architecture, microservices, multi-tenancy, code review, CI/CD, Agile

EXPERIENCE

Fullstack Developer — VR Academy Jan 2026 – Aug 2026

NestJS · Nx · Colyseus · React · Vite · TypeScript · PostgreSQL · Redis · Elasticsearch · AWS S3

- Built a multi-tenant SaaS platform for immersive VR training, owning both the NestJS backend and the React/Vite frontend inside an Nx monorepo.
- Implemented real-time multiplayer session state with Colyseus and Socket.IO, keeping VR devices synchronized across shared virtual classrooms.
- Designed device authentication at the WebSocket connection phase with API-token validation, closing an auth gap in the device-join flow.
- Integrated Elasticsearch for content search and AWS S3 with presigned URLs for secure media delivery; shipped an AI-assisted 360° content generator module from API design to the tenant-facing UI.
- Applied Clean Architecture across shared libraries to keep the platform maintainable as the team and feature set grew.

Fullstack Developer — ASSIT TI · Sociedad Puerto Aguadulce Jan 2022 – Aug 2025

Angular 15 · NgRx · TypeScript · Spring Boot · WildFly · Microservices

- Led the migration of a legacy port-logistics system from AngularJS to Angular 15, cutting technical debt and improving load time by ~90%.
- Built and maintained Spring Boot microservices on WildFly supporting port operations at 99.9% uptime.
- Implemented NgRx state management to handle complex real-time data flows across operational dashboards.
- Worked in a GitLab-based workflow with code review and coordinated release branches.

Fullstack Developer — ASSIT TI · Caring Data Jul 2023 – Aug 2025

React · Laravel · MySQL

- Developed a geriatric-care management platform end to end: React frontend, Laravel REST backend, MySQL data layer.
- Modeled complex relational schemas covering residents, staff, medical records and scheduling.
- Built admin panels with dynamic tables and custom reporting used daily by internal staff.
- Provided ongoing maintenance and direct technical support to end users.

Software Engineer — IEH Electricidad Jan 2020 – Dec 2021

React · Express · Node.js · MySQL · MongoDB · Linux · SVG

- Built interactive SVG diagrams and dynamic charts for real-time monitoring of electrical grid networks.
- Developed REST APIs with Express backed by MySQL and MongoDB.
- Rebuilt the monitoring UI in React, substantially reducing initial load time on the operator dashboard.
- Configured and deployed HTTP servers on Linux with automated deployment, reducing manual release errors.
